CHANGE THE GAME OF FLEET MANAGEMENT

In small to mid-sized businesses, IT managers tend to wear multiple hats. They are tasked with constantly updating their organizations' technological capabilities while simultaneously competing with other departments for limited budgetary resources. And, because IT has traditionally been viewed as a cost center, getting a fair slice of the pie is often difficult.

But in today's digital economy, where productivity drives profitability and networks power the enterprise, IT departments actually are a critical component of success. With a focus on day-to-day productivity and safeguarding work environments using a secure management solution, IT can be a key driver of business growth.

WHAT WE DO ?

LIVERA TRACK provides vital fleet management capabilities for small and mid-sized businesses. Our multifunctional product delivers operational visibility into the following:

- Real Time Vehicle Monitoring
- Vehicle Movement Reports
- Fuel Consumption and Theft Detection*
- Customer / User Management
- Desktop / Email / SMS Notifications
- Web & Mobile App
- Expense Manager
- Driver Management
- Vehicle Records and Compliance Management
- Export and Share PDF /Excel Reports
- Cloud Based Scalability
- 3 Months of History PlayBack / Export

THE PILLARS OF PRODUCTIVITY

VISIBILITY

Get the insight you need to make changes that work. Notice which vehicles/drivers are underutilized and understand where they can best be redeployed. See which vehicle is best utilized / Identify your best performers and model your policies accordingly.

CONTROL

Manage with greater understanding and dexterity. Oversee vehicle trips and routes. Control Time and Costs with the information generated by our software

COMPLIANCE

Rules aren't rules if they aren't being followed. Understand who is complying with the use policy and take steps to steer behavior. Be audit-ready with fleet management and tracking. Increase your awareness of unauthorized trips on company vehicles and ensure mandatory tracking devices are installed.

WHETHER MONITORED OR NOT, THE PROBLEM IS REAL

80% of accidents occur due to Over Speeding

15-20 % of fuel theft accounts to Rs 2.0 Lakhs p.a. per truck

30-40% of engine running time is not work related

60% of all trips are delayed for lack of monitoring

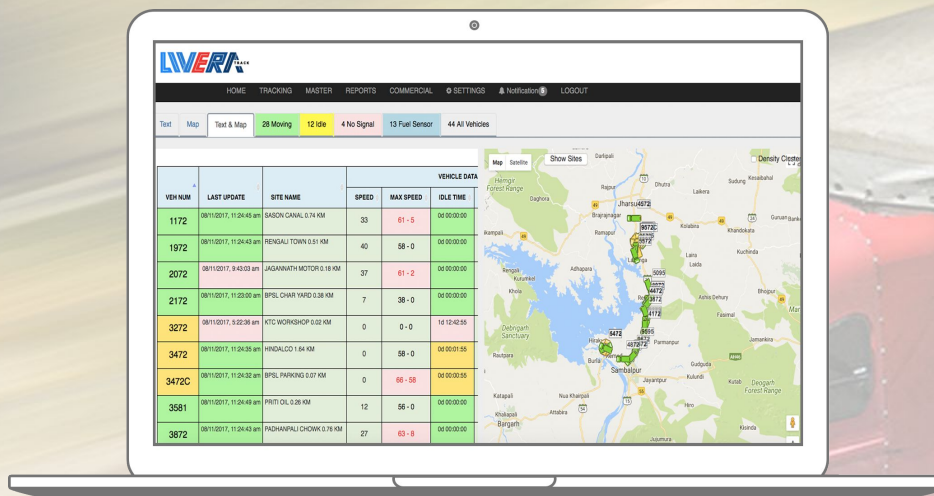

96% of route breaches target fuel/material theft

60% of small fleet businesses close within six months of experiencing fuel thefts / accidents

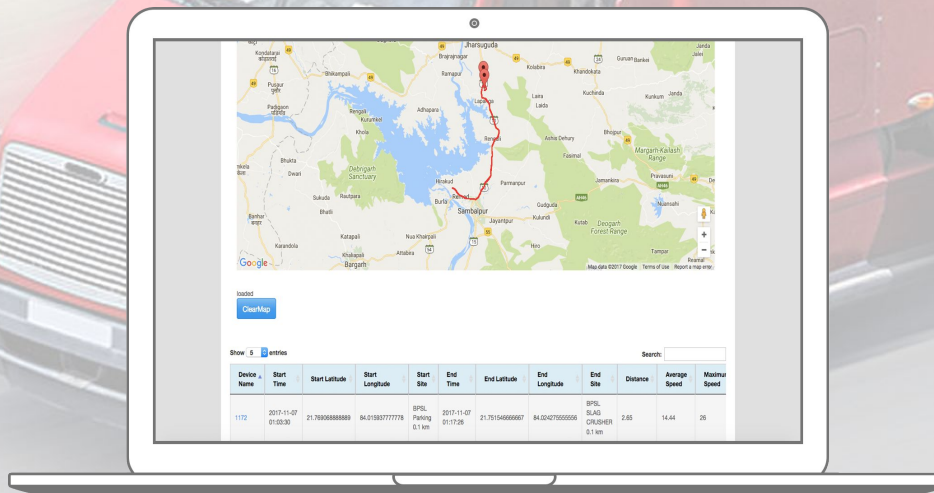

GREATER VISIBILITY

Using a simple web browser UI, Managers can monitor all there vehicles in one place in both Tabular / Map Format along with numerous useful real time parameters

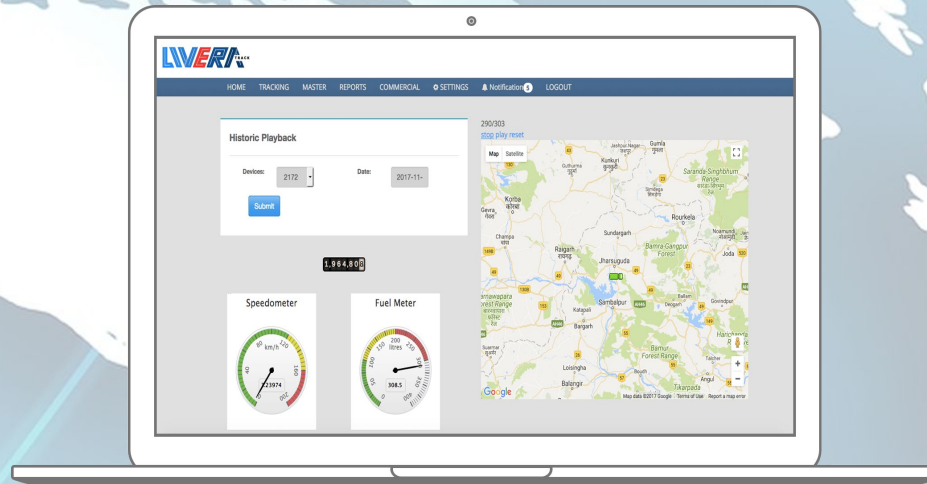

Managers have access to comprehensive logs of vehicle activity so they can track policy violations during operations. Violations are set by company policy and can flag a wide range of unauthorized actions by drivers, including overspeeding or route deviations or even fuel theft information.

By automatically detecting the devices attached to the vehicles and collecting their real time feeds, you can identify all the vehicles that need to be manage. In addition, Managers can detect vehicles running speed, distance covered, average speed, maximum speeds , fuel consumed/filled/stolen. This can give you better visibility toward protecting your network from threats, infections, and malicious activities.

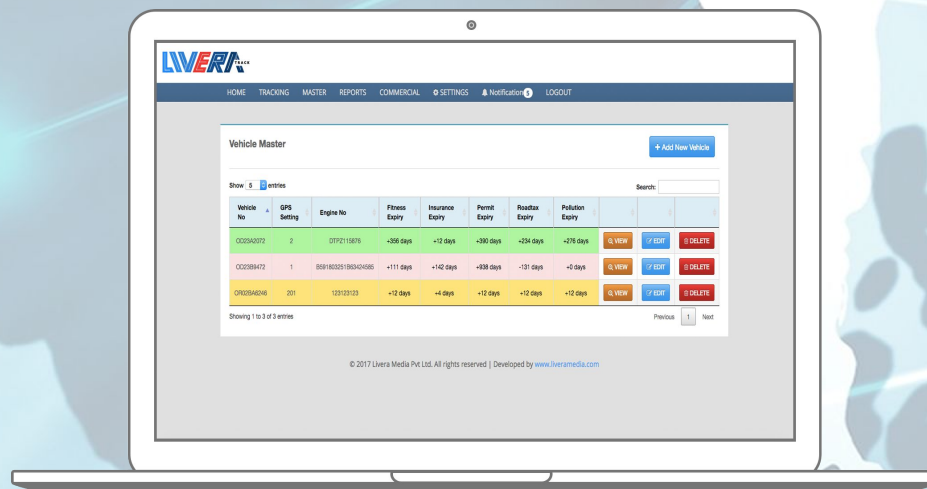

UNPRECEDENTED CONTROL

By reviewing the historic playback , Managers can have an insight into driving behaviours and vehicles performances , trip timings and fuel consumptions for their vehicles. Notifications for Over Speeding , Geofence Entry / Exit , Fuel Fill / Drop , Idling and more will provide all necessary control our your fleet

SIMPLIFIED COMPLIANCE

Information collection occurs automatically every 10/30 sec allowing Managers to maintain an optimum performance of fleet without the need for additional management action. With support for more than 150 GPS tracking hardware , our software doesn't restrict Customers from experimenting or choosing the best options for TRACKING. All information is stored securely on AWS (Amazon Web Services) Cloud servers which ensure 24x7 technical support from our end. View Records as old as 3 months or More (depending upon your plan)

CAPABILITIES AT A GLANCE

FUNCTION	DETAILED FUNCTION	OVERVIEW
Tracking	Real Time Tracking	Track all your vehicles at once place in real time
Master	Vehicle	Maintain Vehicle Records
	Driver	Maintain Driver details and assign Vehicles
	Device	Add Tracking device and link to your vehicle
	Group	Create Groups of Vehicles
	Customer	Manage and share Vehicle Tracking information with your customers
	User	Create Multiple Users for you / your customers
	Geofence	Manage Geofence , directly drawing interest areas on Maps
	Expense	Log and view Expenses related to Vehicles
Reports	Historic Playback	This is like DVR for GPS. Replay your vehicle movement for the selected period and see it in action with interactive Dashboard and Map
	Fuel*	Get comprehensive insight into your fuel consumptions
	Trip	Automatically detects Trips and they can be Exported in PDF/Excel
	Stop	View Stop time and locations of Vehicles
	Summary	Summarise vehicle performance and optimise business based on reports
Notifications	Route	Renders step by step route for every 10/30 sec of vehicle location
	Events	Review Ignition / Moving / Idle / Geofence entry-Exit events
	Notifications	Monitors all activity to identify which vehicles are deviating from rules and notify managers to take decisions based on those in real time
Settings	Settings	Enables users to customise their experience with our system

HOW VEHICLE TRACKING WORKS ?

Your Vehicle is fitted with a tracking device with a cellular sim card. The device uses cellular internet connection and periodically updates its positions to our server, which stores and reports the information to your PC / Phone. This information is securely stored in our cloud servers.

1. The GPS Satellite provides the Vehicle's position in Real Time with respect to the GPS device.

2. The Vehicle fitted with GPS device with cellular internet facility.

How VTS Works?

5. The Personal Computer displays information in real time using online GPS Tracking software.

4. The internet provides the means for the data transaction between the cloud server and the Personal Computer.

3. Information is transmitted between the vehicle and the telecom company via wireless cellular connection.

ABOUT US
